86% CLINICAL RATING

Key features: Face mask • Debris deflecting shield attached • Protects the "bottom gap," the most common pathway of debris to the eyes

Description

Surgical Facemask with Bottom Gap Shield is a Level 2 face mask that is:

- Combined with a bottom gap shield that deflects debris from the gap between the protective eyewear and face mask
- Designed to accommodate any size or style of glasses or loupes
- Less waste than a full-face shield mask
- Easy to adapt

Indications

- Any dental procedure in which a mask is worn, especially if there could be heavy spray or debris

Unique Attributes

- Designed to not interfere with line of vision
- Efficiently closes the bottom gap without the glare, discomfort, fogging, visual distortion, or condensation that are typically associated with full-face shields

Evaluators' Suggested Uses

- "During surgical extractions with a surgical handpiece."
- "Great when trimming models in the lab."
- "Hygiene liked them during calculus removal, ultrasonic scaling, and air polishing."
- "Removing old amalgams or cutting off crowns."

"EXCELLENT PROTECTION FROM SPRAY/DEBRIS, AND A COMFORTABLE FIT."

Evaluators' Comments

"I was surprised to see the debris on the gap shield, which means that is usually going in my face and potentially in my eyes."

"I used this mask 100% of the time with my microscopes. When I rarely back out of the eyepiece, I felt more protected than with a regular mask."

"Kept my loupes much cleaner."

"Worked great in the lab trimming dies and models."

"Protection without distortion or feeling of confinement like wearing a shield."

"When not looking through loupes, I had to bend my neck more to look down rather than just move my eyes."

"Took a little while to get used to having a shield there, as well as consistently getting the proper bend in the plastic shields to accommodate my style of eyewear."
