88% CLINICAL RATING

Key features: Hydrogen Peroxide wipe • Universal 1-minute contact time • New easy open/close top • Effective disinfection against all 67 listed pathogens including MDRO's (Multidrug Resistant Organisms)

Description

Caviwipes HP are hydrogen peroxide-based disinfecting wipes rather than the traditional alcohol-based disinfecting wipes. While removing 67 listed pathogens in a one-minute time frame, these wipes give the team the ability to confidently and quickly clean all surfaces from the bacteria, germs, and viruses that can impact your office.

Indications

Indicated for use in all areas and surfaces without the requirement for PPE for normal use.

Unique Attributes

Hydrogen peroxide-based disinfectant for a faster and more comprehensive cleaning with less irritation that is common with traditional alcohol-based cleaners. Available in both a standard 6"x6.75" size or an extra-large 9"x12" size wipe.

Clinical Tips

- Keep them sealed.
- Make sure surface is wet for the full working time.
- The contact time of 1 minute is different from other non-hydrogen peroxide based products, so be sure to read the directions to use the wipes properly.
- Two wipes allow for the most effective clean.
- Keep away from oxidizers, strong acids and strong bases.

**"NO ALCOHOL TO
 WRECK PLASTIC AND
 WOOD SURFACES."**

Evaluators' Comments

- "The smell of Caviwipes HP is pleasant (no alcohol type odor)."
- "Would purchase if a spray bottle option is available as well."
- "More moist, larger, easier to dispense, did a better job than my current materials."
- "Plastic barriers do not stick to the hoses, a big plus, and the hydrogen peroxide does not seem to degrade upholstery and hoses as readily."
- "Larger size, better saturated with liquid, no smell."
- "Removal of blood is easier. Wipes dispense easier."
- "Smell was noticeable to some staff."
- "Initial opening of canister is very difficult, we needed scissors."

CAVIWIPES™ HP (Kerr Dental)

Would you recommend CaviWipes HP to a colleague?	
Answer Choices	Responses
Yes	85%
No	15%

Are Caviwipes HP a product you would incorporate in your office?	
Answer Choices	Responses
Yes, instead of current material	38%
Yes, in addition to current material	26%
Maybe, for use in certain cases	18%
No, would not purchase	18%

Comments:

Instead of current material

- If the price were similar I would purchase them
- Trusted brand
- No alcohol to wreck plastic and wood surfaces, Hydrogen Peroxide and not Alcohol
- More efficient
- Less down time
- I like Metrex products. This is an easy one to build into my daily practice
- More moist, larger, easier to dispense, did a better job

In addition to current material

- Depends on the price point
- Great product and packaging

Maybe, for use in certain cases

- Comparable to current wipes, I would purchase if price was favorable
- Would purchase if a spray bottle option is available as well. We use a spray, wipe, spray technique. We can get a spray from Optim but cannot get one for Caviwipes so we won't be switching until a spray becomes available
- Cost would play a factor, because they are so similar. Smell that is less appealing
- I have a lot left of my current product, depending on price I would potentially be interested in switching

No, would not purchase

- Strong odor
- I don't think that I could use the wipes indefinitely and for that reason alone I would not purchase the product.

How would you compare Caviwipes HP to the brand you use most often?	
Answer Choices	Responses
Better	21%
About the Same	44%
Not as good	35%

Comments:

Better

- Larger size, better saturated with liquid, no smell.
- Better saturation and odor.
- No alcohol smell.
- No chemical smell or at least barely perceptible.
- Amazed that just mainly hydrogen peroxide and none of the other chemicals.
- No residue, cleans faster.
- I like the new canister/dispensing, and the smell (no alcohol).
- The smell of Caviwipes HP is pleasant (no alcohol type odor) Plastic barriers do not stick to the hoses, a big plus, the hydrogen peroxide does not seem it will degrade upholstery and hoses as readily.
- Less contact time.

About the same

- Both are similar in effectiveness and ease of use.
- Similar level of safety to Optim.
- I use the regular Caviwipes and thought they were similar. I feel like there was less residue when wiping certain surfaces.
- They both do an excellent job and the towelettes are basically the same quality.
- Same content, same size of towels, same odor.
- I'm not sure what is different from other products.

Not as good

- Very strong unpleasant odor.
- Team did not like scent.
- Not as wet as Optim 1. Surface does not stay wet as long as Optim 1. When you walk back into the room, Optim 1 is still wet/working. Yet, caviwipes HP removes blood easier.
- I have a sensitive nose and the odor of the wipes was overpowering. Comparatively to other products I've used in the past, I found myself constantly sneezing and coughing while disinfecting my operatory.
- I prefer the original CaviWipes.

CAVIWIPES™ HP (Kerr Dental)

What brands of surface disinfectant do you normally use?

- Caviwipes (19 respondents)
- Optim 1 (6 respondents)
- Caviwipes 2.0 (1 respondent)
- Clorox Hydrogen Peroxide Wipes (2 respondents)
- Bumblebee Green
- Discide Ultra

What did you like best about Caviwipes HP?

- Ease of use
- Size of wipes
- Quick disinfecting time
- Ease of use for entire op
- Easily dispensed
- Safety
- Caviwipes are easy to use and dispense. There is always a lot of liquid at the bottom, so they are never dry unless you leave them open.
- Kill time
- Better saturation and odor
- Kind on technology
- Small amount of lingering smell after
- Left surfaces squeaky clean
- Pleasant odor and no residue
- Removal of blood is easier. Wipes dispense easier
- The smell of the Caviwipes was good
- It was useful for situations where alcohol based is contraindicated and it is quick drying
- I enjoyed the product packaging the most. I found that the lid was very useful when pulling wipes out and they never got stuck or had issues with pulling too many at a time. I also enjoyed how saturated the wipes were, especially when cleaning the room, they were never dried out.
- Easy dispensing
- The canister was better on the HP product
- Ease of use and shorter effective time
- That it is HP
- Ease of use
- The pleasant smell, lack of causing sticking to hoses. The lid and ease of dispensing
- Contact time, better at blood cleaning
- Size of cloth
- Saturation
- Seems to wipe smoothly and doesn't leave a residue, it dispenses well from the container, with my current one I always have to open the top to rip the individual wipes
- The little tab that you opened the container with was a great addition. Ease of dispensing, Moisture and larger. Overall my team loved the product!

What did you like best about Caviwipes HP? (cont.)

- Saturation
- Nicely saturated and moist
- Container
- Their ability to disinfect easily
- Easy dispensing
- The container and that more disinfection of certain bacteria are covered with this product

What did you like least about Caviwipes HP?

- Smell, residue left on counters
- Not much
- Odor
- No spray available
- They still leave some residue, I wish I could feel more comfortable using them on all surfaces, including x-ray sensors, handpieces and glasses
- Scent
- More wipes in the canister would be great
- Still clouds some surfaces, but slightly
- For opening the cover the first time, the green cover has to be pulled off and it is not easy. I do not know if our female assistants can do it. Once the cover is off, remove the plastic seal and to get to the first wipe out is time consuming and a struggle.
- Smell
- Smell is offensive to some staff. Initial opening of canister is very difficult, we needed scissors
- Seemed to take a while to dry
- I could not tolerate the odor
- The canister is a little more bulky than what we use
- I thought they took a little longer to dry
- Size of wipe
- Dispensing-but they are all somewhat difficult

Do you have any clinical tips for using Caviwipes HP?

- Keep them sealed
- Make sure surface is wet for the full working time
- Be sure to close the container after use
- Wear gloves to prevent contact with skin
- Keep away from leather chairs
- Have a spray to keep it wet longer. Or use a different material for the wipe to keep it wet longer
- The contact times differ from other non-hydrogen peroxide based products, so be sure to read the directions to use the wipes properly
- They do tend to dry out faster when using them
- Two wipes allow for the most effective clean

NOTE: Background information from the evaluation on this page is provided for internal use only and will not appear in the final report.

CAVIWIPES™ HP (Kerr Dental)

Do you have any suggestions for improving Caviwipes HP?

- Reduce smell and residue
- Make a spray available
- Have the first wipe already through the slot with plastic seal still over it so you avoid the struggle to get the first wipe out and to weave it through the cover slot. Or, make the first wipe actually a harder material like plastic attached to the second wipe and have it already through the cover slot on the top easier access to get the first wipe. You need muscles to get the cover off to then remove the plastic seal
- Make them accessible for all surfaces
- Larger wipes
- I don't know if there is a way to improve the lingering odor, but that would be my only suggestion
- Smaller canister size
- Differentiate yourself on the packaging. Why should I buy you over other wipes?
- More liquid, higher saturated wipes
- The little curved tab to grab is a brilliant idea

Were there any clinical situations in which you felt Caviwipes HP stood out or was especially useful?

- Liked them for use in our office lab
- Useful in any situation where we needed disinfection
- Quick turnaround
- Can this be used on a child's clothing to remove vomit?
- When alcohol wipes are contraindicated
- One minute vs 3 minute drying time was nice, but not a game changer
- They were very good at cleaning all the surfaces of our rooms
- Blood spills, particulate from acrylic adjustment removal
- Helpful to wrap air water syringes and suction for overnight
- Wiping of dental chairs between patients-quick and effective

How would you compare Caviwipes HP to the brand you use most often?	
Answer Choices	Responses
Yes	0%
No	100%

Additional Comments on Caviwipes HP:

- Any data to show it is the same as and as effective as Caviwipes? Neat idea to have HP
- Good product. Will have to compare pricing with our current wipes
- This is the first product in my office that my staff said I have to switch to immediately!
- Nice scent and easy dispensing were pluses
