Category: Resin-modified Glass Ionomer Restorative

Description

AxioGlass RMGI is a single-component, light-cured, flowable glass ionomer composite designed for small Class I and Class II restorations, cavity lining beneath composite restorations, and extended pit-and-fissure sealing. Its low-viscosity formulation promotes adaptation to the tooth surface and penetration into small cavities and fissures. Fluoroaluminosilicate glass fillers provide sustained fluoride release, while the resin-based matrix allows rapid polymerization with visible blue light.

Unique Attributes

- Fluoride-releasing formulation for added protection around restorations and sealants
- Controlled syringe delivery with an easy-to-manipulate consistency
- Versatile use as a cavity liner/base, pit-and-fissure sealant, and small restorative material

Clinical Tips from Evaluators

- Works well as a cavity base or liner.
- Use a smaller-gauge tip when dispensing.
- Use as a liner or pit-and-fissure sealant.
- Read the IFU carefully.

"GREAT PULP PROTECTIVE PRODUCT WITH FLUORIDE RELEASE. NO SENSITIVITY ISSUES."

Evaluators' Comments

"Very good viscosity, easy to manipulate in the cavity, shade is very acceptable, material is hard after curing."

"Easy to clean up and had good radiopacity on radiographs."

"I would continue using this as a base/liner and top it with other restorative material(s)."

"I felt the tips were a little too wide for the material and it came out very quickly."

"A little runny."
